	<p>The tester creates a Range Ring object on a position. Then, the ASD center is moved in order to have the range ring center at the bottom of the 1st screen. The tester selects the Range Ring object (click AB on Range Ring center). The tester opens the Conextual Menu over the Range Ring in order to benefit of RR options: CTRL + click AB on the selected range ring center.</p> <p>The mouse pointer is then moved far away the first line of the menu (NOK). The pointer shall be placed on the first menu entry.</p> <p>Same behaviour with the 2nd screen.</p>

Analysis Results	<p>CR automatically CREATED due to the reopening of COMP00256916.</p> <p>REOPENING REASON: PGUERARD 02/03/2017: Verification performed on a one screen CWP - OK (default position of mouse pointer at contextual menu opening over a selected RR OK). Verification performed on a three screen CWP - NOK: the defect correction is not acceptable (the mouse pointer is moved on the bottom of the menu). Moreover the correction introduces a regression: once the mouse pointer is near a main screen border, the default position of the mouse pointer at opening is always far below the menu (for all contextual menus).</p>
